

iGene Laboratory announces the awarding of a tender from Singapore's Health Promotion Board

SINGAPORE, 26 July 2021. As reported in today's The Straits Times newspaper - iGene Laboratory Pte Ltd was one of two companies, out of 15, to be awarded the tender by Singapore's Health Promotion Board (HPB) for the provision of Antigen Rapid Testing, RT-PCR swabbing and lab testing services for the HPB's Quick Test Centres (QTC's) being established across 20 locations island wide.

Established to assist and support small businesses whose staff are required to undergo regular testing, Quick Test Centres enable workers in higher-risk settings to undertake the fast and easy test (FET) every 14 days.

Swab patients will be informed of their results via SMS within the day. People with a positive or second invalid ART test result will be instructed to go for the gold standard confirmatory polymerase chain reaction (PCR) test, which is highly accurate in the diagnosis Covid-19 infection but takes longer to return results.

iGene Laboratory is an INEX Innovate Company.
